- Can interact with other medications,
- Regular testing is still recommended (3-6 months, or if you have symptoms)
- Condoms are still the most effective STI prevention option

- Take with food and a big glass of water
- Stay upright for 30 mins after
- Check in with your GP if using more than 1-2 times per week
- Does not protect against HIV (consider using HIV PrEP) or other viral STIs

Tips and Safety

Doxy-PEP: STI Protection After Sex

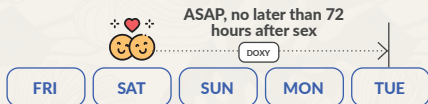

A quick guide

Doxy-PEP helps to protect
against syphilis and chlamydia

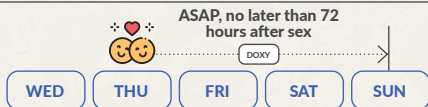

Doxy-PEP involves taking 200mg of doxycycline as soon as possible - but no later than - 72 hours after sex.

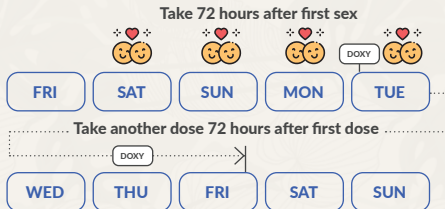

Example 1: Sex on Saturday – take your Doxy-PEP dose as soon as possible, and no later than Tuesday.

Example 2: Sex on Thursday – take your Doxy-PEP dose as soon as possible, and no later than Sunday.

Example 3: For multiple days of sex, take one dose after your last day, as long as it's within 72 hours of first sex. If sex lasts longer than 3 days, take another dose 3 days after first dose.

Do not take Doxy-PEP more than once every 3 days.
